The Sinister Jabberwock

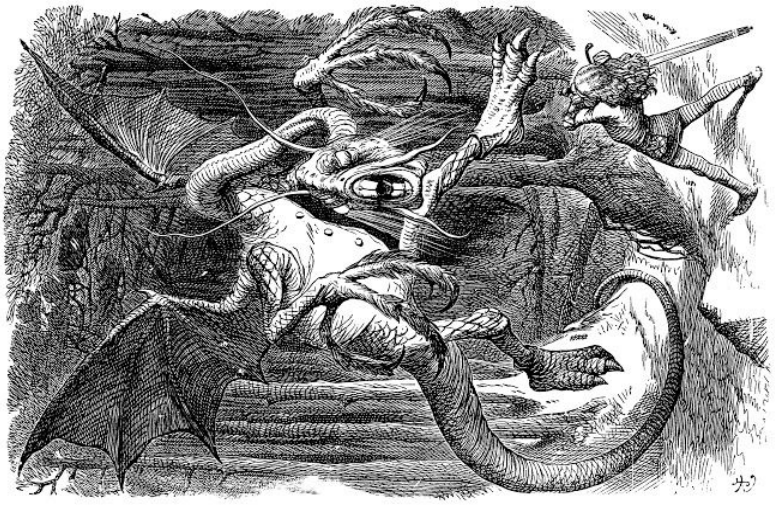

The revolting Jabberwock

This deadly creatures tail is as sharp as a knife and strong as a rock. It could easily cut you in half. Its claws rip and tear your flesh apart. Its eyes blaze like a fire and its eyesight is better than an eagles. The beasts teeth can cut nearly anything. Its wings is its sheild and it has invisible armour. If u shoot a gun at the Jabberwock it will deflect back because of the armour. The scales on the beasts back is razor sharp and protects its back.

The deadly cave

Deep in the heart of the Tulgey woods is the spooky cave of the sinister Jabberwock. It has a pathway leading to the cave. The pathway is littered with human limbs organs skulls and JubJub birds bones.The borogoves try to escape but the Jabberwocks eagle eyes spotted them and the beast devours them. The
JubJub birds cant escape either because the Jabberwock can fly faster.

The disgusting diet

The Jabberwock is a carnivore. It will eat nearly everything. He loves eating kids and bandersnatches tails. He eats JubJub birds like its fried chicken. Then he collects the JubJub birds eggs and when they hatch he devours the baby bird. The jabberwock eats humans limbs and organs like its chips and ketchup. He doesn't care what hes eating he just tears the ribs and get ready for dinner.
