

Homes

In Britain, archaeologists have found evidence of four different types of dwelling. This depended on the time, and the country.

Populated Countries

Today, there are over seven billion people in the world (7,000,000,000). Even at the peak of the Stone Age, it was likely that there were less than five million (5,000,000). About two million years ago, homo habilis appeared in eastern Africa. About one and a half million years ago, homo erectus were living in the Southern Caucasus and Northern China. By 400,000 years ago, the early human population had spread to Indonesia and Europe. By 27,000 years ago, they had set foot in Australia, Poland, Japan and Siberia. It wasn't until around 10,000BC that early humans reached North and South America via the Bering land bridge that, at the time, connected Siberia and North America.

Clothes

People wore animal skins to keep them warm, sewn together using bone needles. The fine bone needles that have been found were probably used for embroidery as well. The bodies of a boy and a girl buried around 28,000 years ago in Russia were found with thousands of ivory beads and fox teeth covering them, work that would have taken years to complete. We also know that people were weaving fabric back then (which could have been used for clothes) and dying spun plant fibres different colours, so maybe fashion started a lot earlier than you might think!
